## Professional Experience

Even though I have a degree in electronic engineering I am a systems professional by choice. In my last two jobs I have oriented myself to Project Management. In both positions I have gained good experience leading teams of software development and system administration, both locally and remotely ones. I'm also experienced at outsourcing resources and work. In 2016 I started a master in software engineering.

I've had the opportunity to work in multicultural environments using the English language to communicate with clients and peers. First with an US multinational company and now with a UK based company. My current job is to coordinate the local team with the UK team to build complex web sites mostly for European non-governmental organizations.

I've been teaching at Universidad Tecnológica Nacional since 1996. Most of my work as a professor has been teaching structured and object oriented programming in C/C++.

In my opinion my strong technical background, high capacity for management and passion for what I do can provide high added value to any organization where technology and methodology are a priority.

## Companies I have worked for:

### Tincan (since 2008): Website development and administration

- Role: Drupal expert, coordination of projects and production
- Objective: Improvement of productivity and processes
- Achievements: Since I've been working for this company we've cut down the training periods as a result of better knowledge management and team work. This has directly affected the customer satisfaction due to better response times. I've also established better processes for software development and system administration which have as a result have less incidents in general and specifically less critical ones.

### Baufest (2004-2008) – Software development and support services

- Role: Coordination of outsourced support team for the ecommerce platform of USA client SC Johnson.
- Objective: Create a strong bond with the client's ecommerce team to increase the outsourced team's size.
- Achievements: I started as a single GXS developer for the account and ended up coordinating a team of six people supporting the ecommerce platform. Work included support and development for this platform, including project coordination.

### HAL (2003-2004) – Professional Services

Independent endeavor
Software development, networks and data recovery.

### AGUILAR Y ASOCIADOS (1999-2003) – Network analysis, hosting, security and training

Among it's most important clients I can mention:
Citibank, HSBC, JP Morgan, Marsh, BNL, Total Austral, Aventis, Ericsson,
Sancor, Siembra, Ledesma, Hosp. Italiano, AON and Microsoft.

**INDE software and network services (1997-1999)**
> Data base support for Aguas Argentinas.
> Network support for Bulló & Associates.

**SADRAS INFORMÁTICA (1994-1995)**
> Software development, IVRs and computer general support.

## Studies

**MASTER IN SOFTWARE ENGINEERING** – UTN – 2016 onwards
**PROJECT MANAGEMENT (PMI)** – ITBA (2006) – *PMP pending*
**UNIVERSIDAD TECNOLÓGICA NACIONAL:** Electronic Engineering (1994-2001)
**ASOCIACIÓN CRISTIANA DE JOVENES:** Lifeguard (1998)
**COLEGIO INDUSTRIAL PIO IX:** Electronic Technician (1988-1993) Engineer

## Languages

Spanish: Native.
English: Speaks fluently, Reads and Writes.

## Courses

- **DrupalCon:** 2014 Austin, 2015 Bogota & 2016 Dublin
- **Introduction to Symfony2: Getting Ready for D8** (2014)
- **Startup competition and mentoring (NAVES IAE)** (2013)
- **How to sell technology solutions** (2007)
- **Team leadership** (2006)
- **Aspect oriented programming** (2005)
- **Software development with RUP** (2005)
- **Use cases analysis** (2005)
- **JAVA programming** – UBA (2003)
- **Packeteer's PacketShaper :** Intensive course ( *California USA* – 2000 )
- **Network LAN & WAN monitoring, analysis & y management** *(1998)*

## Technical skills

- Administration of sites built with opensource platforms (Wordpress & Drupal)
- Hosting, development and maintenance of Web sites running over LAMP platforms
- B2B electronic commerce: X12, GXS & SAP
- Programming over different paradigms in different environments (Win/Unix)
- Network administration over different platforms (NT/Linux), firewalls, mail servers, etc.
- Network traffic analysis in LAN and WAN environments
- Development of tools for traffic analysis
